PROFILE

I have just finished my first year studying MLOps Engineering at Nackademin. I love tech and focus on how to take machine learning models from code into reliable production. In my spare time, I build my own projects to test new tools. I have already built two end-to-end applications where I experimented with Docker, GitHub Actions, MLflow, and Evidently. Now I am looking for a team where I can learn more, ask questions, and contribute with my structured way of working.

EDUCATION

Nackademin – MLOps Engineer

Aug 2025 - Jan 2028

A practical program focusing on automation, cloud infrastructure, and the stable operation of ML systems.

- Infrastructure & Data: Linux administration, database management, cloud platforms, and MLOps workflows.
- ML & Development: Python for MLOps, ML models, algorithms, and frameworks.
- Methodology: AI-augmented strategies and hybrid AI teams.
- Internship (LIA 1): Feb 8, 2027 – May 21, 2027 (15 weeks).

Karlskoga folkhögskola – Web Development

Aug 2022 - June 2024

A two-year program covering both frontend and backend development, featuring extensive practical project work.

- Tech stack: Frontend and backend development using HTML, CSS, JavaScript, databases, and APIs.
- Tools: Git/GitHub, basic UI/UX, and agile teamwork.

PROJECTS

Project: Churn Predictor

A concise web application for predicting customer churn. My focus was on building a simple end-to-end pipeline on my own.

- Created a web app to predict customer churn using scikit-learn.
- Built the backend API with FastAPI and created a simple frontend.
- Used MLflow to track experiments and deployed the app to Render using Docker and GitHub Actions.

GitHub: <https://github.com/BigLurch/churn-predictor>

Live server: <https://churn-predictor-65f9.onrender.com>

Projekt: Fraud Detection Platform

A project focusing on the monitoring and testing of a ML systems.

- Built a system for fraud detection with a Streamlit interface for visualization.
- Wrote unit tests with pytest and used Docker Compose to orchestrate the environment.
- Managed models in MLflow and used Tracking/Evidently to analyze data drift.

GitHub: https://github.com/BigLurch/fraud_detection_platform

Live server: <https://fraud-detection-deshboard.onrender.com>

WORK EXPERIENCE

Revent International AB – Warehouse & Logistics

Sept 2011 – Present

Responsibility for the daily logistics flow, warehousing, and material handling in a production environment.

- Structure & Flows: Extensive experience in optimizing and structuring physical flows, requiring a high level of precision and a process-oriented mindset.
- Systems & Administration: Daily use of internal business and warehouse systems for data entry, traceability, and quality control.
- Collaboration: Works closely with production and purchasing to resolve issues and ensure timely deliveries.

BR-Leksaker – Sales Associate

Aug 2010 - Sept 2011

Work involving customer service, sales, and daily store operations in a fast-paced environment.

- Communication: Developed strong skills in listening, understanding customer needs, and communicating in a clear, educational, and service-oriented manner.
- Flexibility: Handled diverse tasks and rapid shifts in priorities, ranging from cashier duties to merchandising and inventory management.

TECHNICAL SKILLS

- MLOps & Cloud: AWS, Azure, Docker, Docker Compose, MLflow, Evidently, GitHub Actions, Linux.
- Dev & Data: Python, FastAPI, JavaScript, SQL/NoSQL, REST APIs, Git/GitHub .
- Machine Learning: Scikit-learn, Pandas, NumPy, ML algorithms.

CERTIFICATIONS & GOALS

- In Progress: Studying for the AWS certified machine learning engineer associate(MLA-C02).
- Technical Goal: To learn more about Kubernetes, CI/CD automation, and monitoring large systems in production.

LANGUAGES

- Swedish: Native
- English: Professional proficiency
