Jonas Johansson

MLOps Engineering Student - Python - Machine Learning - Cloud & CI/CD

Stockholm, Sweden - +46 76 568 96 31 - jonas.lg.johansson@gmail.com

LinkedIn - GitHub - Portfolio

PROFILE

MLOps Engineering student with a background in web development and hands-on experience building machine learning and AI applications. Through independent projects and academic collaborations, I have gained practical experience in ML pipelines, API development, automated testing, containerization, cloud deployment, and LLMOps.

I enjoy solving technical challenges, understanding how systems interact, and developing structured, reliable applications that go beyond model training.

Seeking an MLOps / AI Engineering internship (LIA): February 8 - May 21, 2027.

TECHNICAL SKILLS

Programming & Data: Python, SQL, JavaScript, Pandas, NumPy, FastAPI, REST APIs, Git, Pydantic

Machine Learning: scikit-learn, classification, regression, feature engineering, model training and evaluation

MLOps & Cloud: Docker, Docker Compose, MLflow, GitHub Actions, CI/CD, Microsoft Azure, Render, Linux

Monitoring & Testing: Evidently, data drift detection, pytest, automated testing, API logging

Generative AI & LLMOps: LLM applications, RAG, AI agents, multi-agent systems, Pydantic AI, LangChain, prompt engineering

SELECTED PROJECTS

Fraud Detection Platform - Independent Project | End-to-End MLOps

Python - scikit-learn - FastAPI - MLflow - Evidently - Docker - GitHub Actions

- Designed and developed an end-to-end fraud detection platform using synthetic transaction data, including preprocessing, feature engineering, model training, and real-time inference.
- Built a FastAPI prediction service, a synthetic transaction simulator, and an interactive Streamlit dashboard displaying fraud alerts and risk indicators.
- Integrated MLflow for experiment tracking and model artifacts, and Evidently for data and feature drift analysis.
- Implemented automated ML workflow checks and tests using pytest and GitHub Actions, with containerized services managed through Docker.

Churn Predictor - Independent Project | Machine Learning & Cloud Deployment

Python - scikit-learn - FastAPI - MLflow - Docker - GitHub Actions - Render

- Built a customer churn prediction system using synthetic telecom data, with preprocessing, feature engineering, model evaluation, and a reusable training pipeline.
- Developed a FastAPI application with an interactive web interface supporting batch predictions, risk filtering, CSV exports, and what-if analysis.
- Added MLflow experiment tracking, structured API logging, retraining scripts, and script-based data drift checks.
- Containerized and deployed the application on Render, with automated linting and tests through GitHub Actions.

Nordic Travel Chatbot - Academic Team Project | LLMOps & Cloud Integration

Python - Streamlit - FastAPI - Pydantic AI - PostgreSQL - Docker - Azure

- Collaborated on a full-stack, AI-powered travel recommendation application using an LLMOps-oriented architecture.
- Developed the Streamlit user interface, connected it to backend services, and structured JSON-based information for the LLM application.
- Took a leading role in deploying and configuring application services in Microsoft Azure, resolving cloud deployment and integration issues.
- Improved code organization and collaborated on troubleshooting to support a more maintainable application.

EDUCATION

Nackademin - MLOps Engineer

Higher Vocational Education | Stockholm, Sweden | August 2025 - January 2028

Practical education covering Python, machine learning, ML frameworks, databases, Linux, MLOps, cloud infrastructure, Generative AI, and automation. The curriculum also includes CI/CD, system architecture, security, and model monitoring.

LIA Internship: February 8 - May 21, 2027

Karlskoga Folkhögskola - Web Development

August 2022 - June 2024

Two-year practical program in frontend and backend development, including JavaScript, databases, APIs, Git/GitHub, and collaborative software development.

CERTIFICATION IN PROGRESS

AWS Certified Machine Learning Engineer - Associate (MLA-C02)

Currently preparing - Target: Q1 2027

WORK EXPERIENCE

Revent International AB - Warehouse & Logistics

September 2011 - Present

- Coordinate daily warehouse operations and material flows in a production environment, focusing on accuracy, traceability, and process reliability.
- Collaborate with production and purchasing teams to resolve operational issues and maintain efficient workflows.

LANGUAGES

Swedish: Native - English: Professional proficiency
